

Team Involvement in Demonstration

Date	02 July 2026
Team ID	SWTID-2026-2030
Project Name	Voice Based Concept Understanding Analyser
Maximum Marks	1 Mark

Contribution Summary

The project was planned and executed from requirement analysis to final deployment. The application was designed using Python and Streamlit, integrating speech-to-text conversion, concept understanding analysis, AI-based feedback generation, and PDF report generation. The user interface was developed to provide a simple and interactive experience, while each module was thoroughly tested to ensure reliable performance.

Project documentation, including system architecture, feature descriptions, communication plan, scalability plan, and demonstration materials, was prepared. Before the final demonstration, the application was tested, deployment issues were resolved, and all features were verified to ensure smooth execution.

Team Member:

The project was completed individually, covering all stages including planning, development, testing, deployment, documentation, and final demonstration. All project activities were managed successfully, ensuring the application was fully functional and ready for presentation.

Overall Team Coordination Rating (1–5)

5/5 – The project followed a well-planned schedule, with all milestones completed on time and the demonstration conducted successfully.

Any Issues During Demo

A few minor issues related to deployment configuration and internet connectivity were identified during testing. These did not affect the final demonstration.

How Issues Were Resolved

The application was thoroughly tested before the presentation. Configuration settings were corrected, all modules were verified, and backup test files were kept ready to ensure a smooth and uninterrupted demonstration.
